

10 steps to dramatically increase your productivity with vehicle tracking

Increasing the productivity of both your mobile workforce and your office workforce is easy with vehicle tracking from RAM. Our clients have outlined 10 ways that they have improved the productivity of their whole workforce.

- 1. Increased visibility** – “The RAM system gives us increased visibility of our workforce, ensuring productivity is maximised and planning is much easier,” **Roger Wood, Argus Security Systems (Security).**
- 2. Timesheet verification** – “We wanted to make sure our payroll was being processed accurately and that the engineers were being paid for the times they actually worked,” **Darren Kirk, AR Smith and Sons (Electrical Engineers).**
- 3. Sending the closest engineer to a job** – “The real-time aspect of the system has allowed us to regain control of our resources, meaning we have increased our productivity by assigning the engineer that is closest to the job,” **Carlton Littleford, Carlton Alarms Ltd (Security).**
- 4. Managing jobs** – “By managing the jobs carried out by our engineers more effectively we’ve seen a distinct 10 - 15% increase in productivity,” **David McColl, Classic Lifts Ltd (Service Engineers).**
- 5. Reduction in office administration time** – “Having RAM vehicle tracking has made our life in the office much easier, we can pull off various reports very quickly and simply from the system. Office productivity is just as important as the productivity of our mobile workforce,” **Chaz Kholi, Denby Decorators (Painting and Decorating).**
- 6. Live tracking** – “Before we had RAM Tracking installed our workforce used to come to the yard every morning before setting off to a job, which as we are electrical contractors could be anywhere in the country. This wasted a lot of time and we have seen a definite increase in the productivity of our workers since installing RAM,” **Rob Jackson, DH Marrion Ltd (Electrical Contractor).**
- 7. Reduction in time spent calling engineers** – “It was a labour intensive exercise just to locate ‘the closest engineer’ and a lottery as to who we would call first! Having RAM’s system on our vehicles has saved us this frustration and in turn has noticeably decreased our monthly phone bills,” **Stacey Miller, EDS Ltd (Fire Alarms).**
- 8. Increasing amount of work done in a day** – “Since RAM tracking has been implemented our installers have begun asking for more work when their scheduled job finishes early, this has improved the general productivity and profitability of the workforce,” **Stephen Craggs, G. Craggs Ltd (Electrical Delivery).**
- 9. Re-routing a worker if they get lost** – “We sometimes get calls from operatives who have gotten a little lost on the way to a job. Vague descriptions of their location can be confusing, but the ability to click a button on the mouse and instantly know where they are in relation to the client is outstanding. We can give accurate directions to get him back on track and call the client if the diversion is likely to cause a delay,” **Jeanette Hamilton, Heritage Preservations Ltd (Property Maintenance).**
- 10. Less travel more work** – “We have found since installing vehicle tracking from RAM that there is now less travel time and more work time, we have seen a 20% increase in productivity of the workforce!” **Steve Kittrick, SLK Interiors Ltd (Decorators).**
